

Massive Online Research Collaborations

CrowdSource the Truth

Do you have a complex problem that needs to be solved? A deep inquiry that Needs research? A pressing issue or evolving field that needs monitoring? Movements that aim to become ecosystems? Events that want to live on? Knowledge that wants to be open sourced?

YOUR PROBLEM

You and other geographically-dispersed people are concerned if not working on a BIG hairy problem that has lots of moving pieces, perspectives, and an increasing amount of online content. You are bringing multiple parties to the knowledge table and want to understand, integrate, and synergize across perspectives. You need sharing with easy access to context and timely access to knowledge map across barriers. You need ways to build knowledge together without coordination required.

YOUR PLATFORM

MORC (Massive Online Research Collaboration) is like Second Life meets Wikipedia as a Browser Overlay. Its a Platform for bringing disparate communities together to solve problems, resolve mysteries, and build knowledge with or without active coordination.

- Connect your online research into knowledge map
- Expose false news and misinformation
- Improve building, discovery & access to knowledge
- Build knowledge without coordination but with provenance
- Improve pattern matching, sensemaking & decision-making
- Convene evidence-based dialogues among diverse thinkers

FEATURE SET

- Text, Images, Video & Audio
- Bridges, Lists & Collabs
- Conversations & Notes
- Custom Metadata
- Sharing & Notifications
- Secure Messaging
- Browser Extension
- Future Web & Mobile Apps
- Privacy & Data Sovereignty
- Password-less Security

POWERED BY BRIDGIT

bridgit

Bridgit enables Insight, Debate & Discovery on Every Webpage by making the Entire Web into a Collaborative Research Platform. Our beachhead is a Browser Overlay that enables Researchers to Control, Validate, Organize & Monetize their Annotation Data. Advanced tagging enables the #OverWeb, a Trust Layer over the Webpage. The #OverWeb is a Secure Social Ecosystem. We use AI to assist in Creating/Validating Content and Neutralizing Bad Actors.

STATEMENT OF ETHICS

Acknowledging the reality of exponential technology, we advocate for wise data, wise sensemaking, and wise choices that prioritize resilience, inclusion, and trust. We work with innovators, investors, and customers who share our vision to enable the creation and improvement of technologies, products, companies, and markets that strive for positive social and environmental impact, including protecting and nourishing human potential, human rights, and ecosystems. We envision and work for an Internet that is resilient, inclusive, and trustworthy. We will not undertake or support work that has a greater potential for harm than good.
