About ENESTECH

ENESTECH Software, is a dedicated developer of SENET — SaaS platform for automation of esports venues, gaming lounges, and cyber cafes.

As of January 2022, more than 1800 gaming venues worldwide controlled dozens of gaming computers and consoles remotely with the help of SENET. It restricts access to Windows, automatically tracks time of gaming, and turns off computers when the time is up. Moreover, it has tools to arrange gaming tournaments, to update games on all computers at once, to track all user activities in real time, and much more.

ENESTECH engages a full in-house team for development, support, sales, and marketing of SENET. It's an international crew that speaks 7 languages and knows everything about computer games.
