

# INFI MultiChain

The Protocol Layer for Decentralized Capital Markets

## One-Page Pitch for BOLD Awards

Categories:

- Boldest Blockchain
- Boldest FinTech

## 1. What INFI MultiChain Is (Core Thesis)

INFI MultiChain is not a product.

It is decentralized financial infrastructure.

INFI is building a DAO-governed protocol layer that replaces discretionary, opaque financial intermediaries with deterministic, on-chain logic for:

- capital formation (presales / ICOs / fair launches),
- trading (CDEX),
- liquidity provisioning (AMM),
- risk response and dispute resolution,
- and protocol-level revenue redistribution.

The exchange and launchpad are entry points, not the end product.

The real innovation is the SbSe Protocol, which encodes financial rules directly into smart contracts and DAO governance.

## 2. The Problem (Why This Matters)

Today's blockchain and fintech ecosystems suffer from the same systemic failures:

- Centralized control disguised as decentralization
- Extractive launchpads with high fees, gatekeepers, and insider allocation
- Opaque risk handling and post-launch manipulation
- No neutral infrastructure for fair capital markets

Blockchain promised trustless finance, but most systems still rely on human discretion, politics, and rent extraction.

### **3. The INFI Solution (Boldest Blockchain)**

INFI replaces intermediaries with protocol-enforced logic:

- Fully automated fundraising, allocation, and listing
- Non-custodial trading with deterministic safeguards
- Transparent, on-chain execution and governance
- DAO-driven dispute handling and risk response

#### **Key Innovation: Protocol-Level Protection**

INFI introduces a 48-hour DAO-governed compensation window for verified scam or fraud events.

This is not insurance.

It is a community-backed, time-bound safeguard encoded at the protocol level, a first-of-its-kind mechanism for restoring trust in decentralized launches.

### **4. Why INFI Is Bold Blockchain Infrastructure**

INFI advances blockchain adoption by:

- Removing technical friction for founders (self-service launch)
- Eliminating discretionary listing power
- Encoding fairness, transparency, and accountability into code
- Making blockchain usable without sacrificing decentralization

This is not another DEX or launchpad.

It is blockchain as neutral capital market infrastructure.

### **5. Why INFI Is Bold FinTech**

INFI directly addresses financial inclusion and financial health by:

- Allowing zero-cost fundraising for early-stage builders
- Removing reliance on centralized exchanges and custodians
- Enabling permissionless access to capital markets
- Redistributing 100% of net protocol revenue to participants

#### **FinTech, Reimagined**

Instead of extracting fees, INFI aligns incentives:

- Real usage → real revenue
- Revenue → protocol pool
- Pool → monthly distribution to INFI stakers

This creates a self-reinforcing financial ecosystem without hidden fees, custodial risk, or inflationary token emissions.

## 6. Technology & Security

- Fully non-custodial architecture
- No access to user private keys
- All transactions are user-signed smart-contract interactions
- DAO-only governance (no controlling entity)
- Continuous security monitoring (incl. external threat detection)

Security is not a feature, it is a design principle.

## 7. Economic Model

- Trading fees (CDEX)
- AMM activation fees
- Swap and conversion fees
- Future marketplace and settlement layers (hybrid wallet, e-banking system etc)

All protocol revenue flows into the SbSe PFP Pool, and 100% of distributable profits are redistributed monthly to INFI stakers in USDT.

No artificial yield.

No inflationary emissions.

Only real economic activity.

## 8. Vision (Why This Is BOLD)

INFI's vision is to become the decentralized backbone of global digital capital markets.

A future where:

- capital formation is neutral infrastructure,
- financial rules are enforced by code,
- and trust is replaced by verifiable execution.

From discretionary finance → protocol-enforced markets.

## 9. Why INFI Belongs at BOLD Awards

INFI is bold because it does not optimize the existing system, it replaces it.

It challenges:

- how capital is raised,
- how markets are governed,
- and who financial systems are built for.

**INFI is not following trends.  
It is defining what comes next.**
